TUBERCULOSIS (TB) QUESTIONNAIRE

This questionnaire is about tuberculosis. Tuberculosis is transmitted by a person with tuberculosis to another person through airborne droplets that are coughed or sneezed into the air and breathed in. This transmission of infection is more likely to occur when you and an infectious person spend a lot of time together in a closed environment, like a small room, a car or other similar situations.

Adults who have tuberculosis will often have the following symptoms: cough for more than two (2) weeks duration, loss of appetite, weight loss of ten (10) or more pounds over a short period of time, fever, chills, and night sweats.

Children with tuberculosis frequently do not have symptoms.

A person can have tuberculosis infection and not have active tuberculosis.

- Not everyone who coughs has tuberculosis.**
- TB can cause (low grade) fever of long duration, unexplained weight loss, failure to maintain adequate growth in children, weakness, chest pain, a bad cough, hoarseness, and/or coughing up blood.**
- Tuberculosis is preventable and treatable.**
- Children with active TB often do not show signs of illness. Infants are more likely to have symptoms.**
- We need your help to find out if you have been exposed to tuberculosis.**

Since your last skin test:	Yes	No	I Don't Know
Has anyone in your family had tuberculosis?			
Do you know of any situation where you were around someone who has been diagnosed or suspected as having TB?			
Have you or a member of your family visited a foreign country where there is a lot of TB?			
If yes, which country/countries?			
TB can cause fever of long duration, unexplained weight loss, weakness, chest pain, a bad cough, hoarseness or coughing up blood. Have you been around anyone who has these problems?			
Do you have any of these problems?			
To your knowledge, have you had contact with anyone who is/has been an intravenous (IV) drug user?			
HIV- infection?			
In jail/prison?			
Recently moved to the US from a foreign country?
